Natural Fractures Standard geological fracture terminology is largely based on the engineering terminology, although standard engineering terminology can be used for natural or induced rock fractures. Note that fracture is a general term so that joints and faults are different types of fractures. Induced hydraulic fractures or reactivated natural ... fractures failing in mode I tensile failure may not generate strong enough microseismic signal to be detected via microseismic monitoring methods, so often the microseismic events are interpreted to be the result of a shear failure around the hydraulic fracture or reactivation of intersecting natural fractures [1, 2].
