Texture description and segmentation through fractal ... CONCLUSIONS s related to fractal geometry were proposed as a means of describing and segmenting natural textures. New methods for computing the fractal dimension and lacunarity were developed. The new box dimension estimate was shown to work well in describing and segmenting fractal surfaces. Infrared Image Segmentation by Combining Fractal Geometry ... Abstract: An infrared image is decomposed into three levels by discrete stationary wavelet transform (DSWT). Noise is reduced by wiener filter in the high resolution levels in the DSWT domain. Nonlinear gray transformation operation is used to enhance details in the low resolution levels in the DSWT domain. Fractal - Wikipedia In mathematics a fractal is an abstract object used to describe and simulate naturally occurring objects. Artificially created fractals commonly exhibit similar patterns at increasingly small scales. It is also known as expanding symmetry or evolving symmetry. Texture Description and Segmentation Through Fractal Geometry Fractal geometry is receiving increased attention as a model for natural phenomena. In this paper we first present a new method for estimating the fractal dimension from image surfaces and show. Fuzzy Segmentation Of Natural Scenes Using Fractal Geometry Segmentation of an image into meaningful regions is a crucial component in intelligent scene understanding. In images of natural scenes there is a high degree of variability and uncertainty in the features which represent the regions and objects.

An Automated Segmentation Method for Lung Parenchyma Image ... incomplete segmentation of the juxtaleural nodules and segmentation inefficiency, this paper proposes an automated framework to combine the threshold iteration method to segment the lung parenchyma images and the fractal geometry method to detect the depression boundary. Texture segmentation using fractal dimension - Pattern ... Texture Segmentation Using Fractal Dimension B. B. Chaudhuri and Nirupam Sarkar Abstract-This paper deals with the problem of recognizing and segmenting textures in images.
