The most important decision after identifying that a patient has a surgical proximal humerus fracture is patient selection, specifically with regards to what surgery will be performed. Fracture Management | EMS World Transverse fracture-The fracture is across the bone, and at a right angle to its long axis. Greenstick fracture- This type of fracture is named after the breaking of a green tree branch.

Fracture Management for Primary Care E-Book by M. Patrice ... Identification and management of fractures is an increasingly important aspect of primary care. With its extensive use of diagrams and x-rays to supplement the text, this book fulfills this need and will become an essential reference for any physician. Bone Fractures Management and Treatment | Cleveland Clinic How is a bone fracture treated? A bone fracture is usually treated with a cast and/or splint. A cast or splint will immobilize the bone (keep it from moving) in order to encourage the bones to align (straighten) and to prevent use of the bone. Fracture Nursing Care Management: Study Guide Fracture reduction refers to restoration of the fracture fragments to anatomic alignment and positioning and can be open or closed depending on the type of fracture. Nursing Management Nursing management for close and open fractures should be differentiated.

General principles of definitive fracture management ... (See "General principles of fracture management: Bone healing and fracture description" and "General principles of acute fracture management".) CASTING Overview " Casting is standard treatment for many closed, nondisplaced, or reduced fractures [1].
